

REMARKS

Drawing Figure 1 has been amended as follows. A line has been added connecting programmer socket 9 with the DSP 3. Paragraph [0023] describes the use of the programming socket, and it is well known in the art to provide a programming mechanism to the entity that is to be programmed, the DSP 3. Additionally, the erroneous connection of the transmitter/receiver 12 to the DSP 3 has been changed to correctly associate it with amplifier and A/D converter. The transmitter and receiver 12 and the amplifier-A/D converter is described in paragraph [0026]—it is also well known in the art to connect a transmitter/receiver to an amplifying device. Applicants do not believe that these changes introduce new matter.

Entry of these changes prior to examination is respectfully requested.

Respectfully submitted,

15
